Product Revision

Tips Manufactured Lead Free

On behalf of the management and staff of Taiyo Electric Ind.Co.,Ltd, thank you for your continuing support of **goot** soldering equipment and accessories.

Taiyo is committed to cooperating with the world wide move to produce environmentally friendly electronics products.

Given that the RoHS directive will come into force from July 1, 2006, we are currently manufacturing our products with Lead Free materials. We have also requested our suppliers to supply us with RoHS applicable parts and components. It will take about a year to complete all of the requirements under the RoHS directive. We promise to keep you updated on our progress.

At this time, any tips manufactured Lead Free are laser marked with the symbol LF meaning Lead Free. If you are unsure as to whether the tip you have purchased is manufactured lead free or not, please check out the laser marking on the side of the tip.

Other tips are marked LF - T. The T symbol refers to THICK IRON PLATING. These tips are both produced Lead Free and have thick iron plating. We are producing tips with thicker iron plating to help our users. Tips erode much faster with Lead Free soldering work, so we aim to produce more tips with thicker plating to help lengthen tip life.

Attached is a list of tips and the Lead Free manufacturing status.

We respectfully request your cooperation in educating your customers about this product revision.
